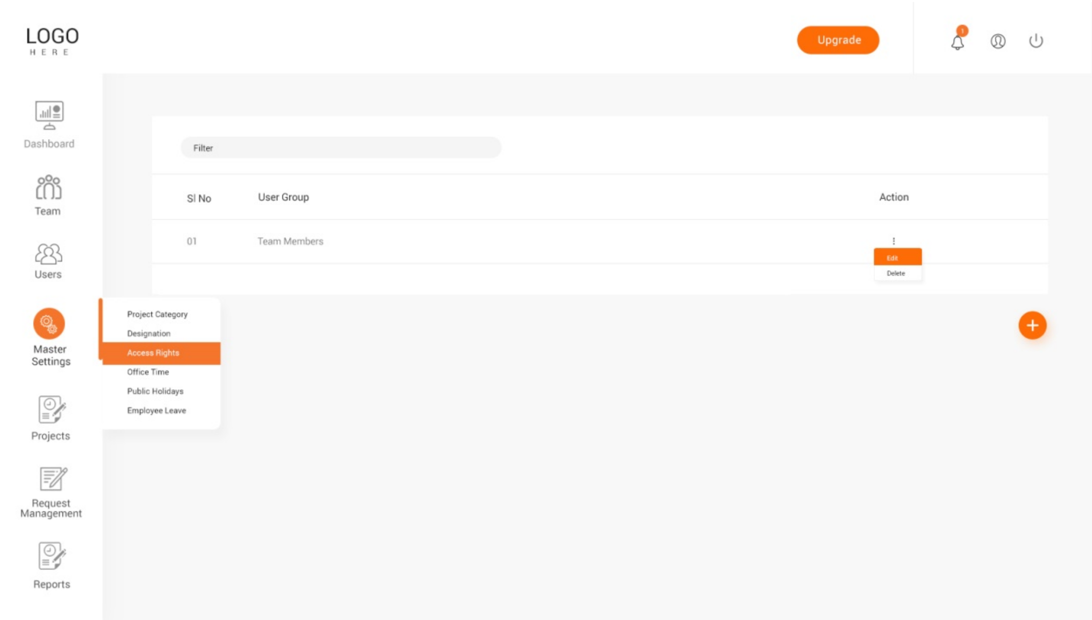
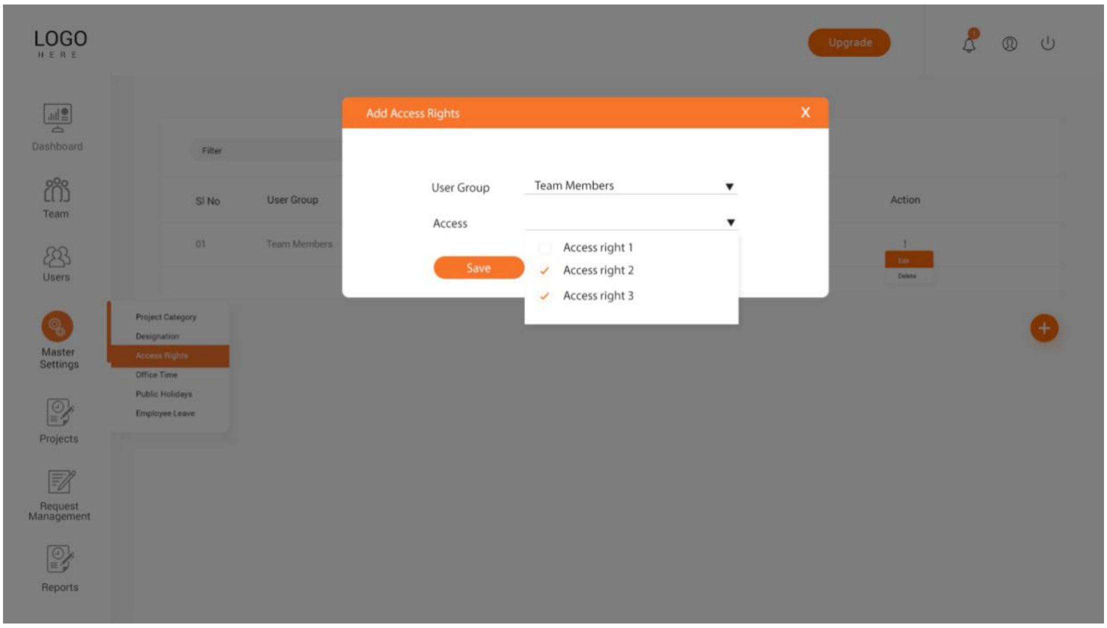
Here, company admin can add a new project category by filling the input field.

- **Access rights**



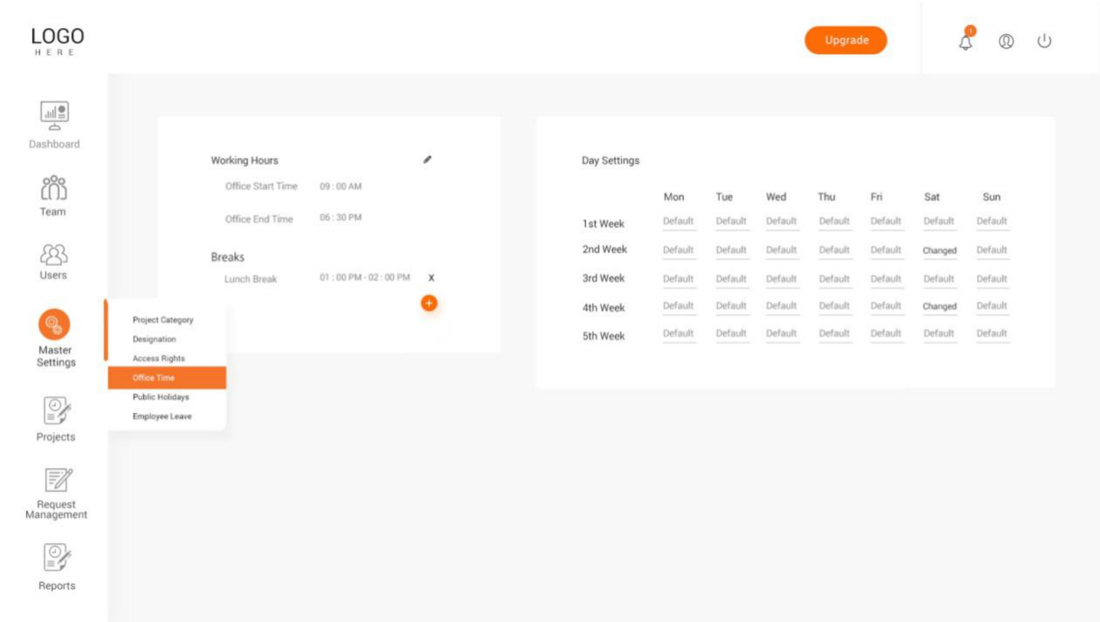
Here the table contain list of all saved access rights of each user groups and edit,delete actions.

Add new:



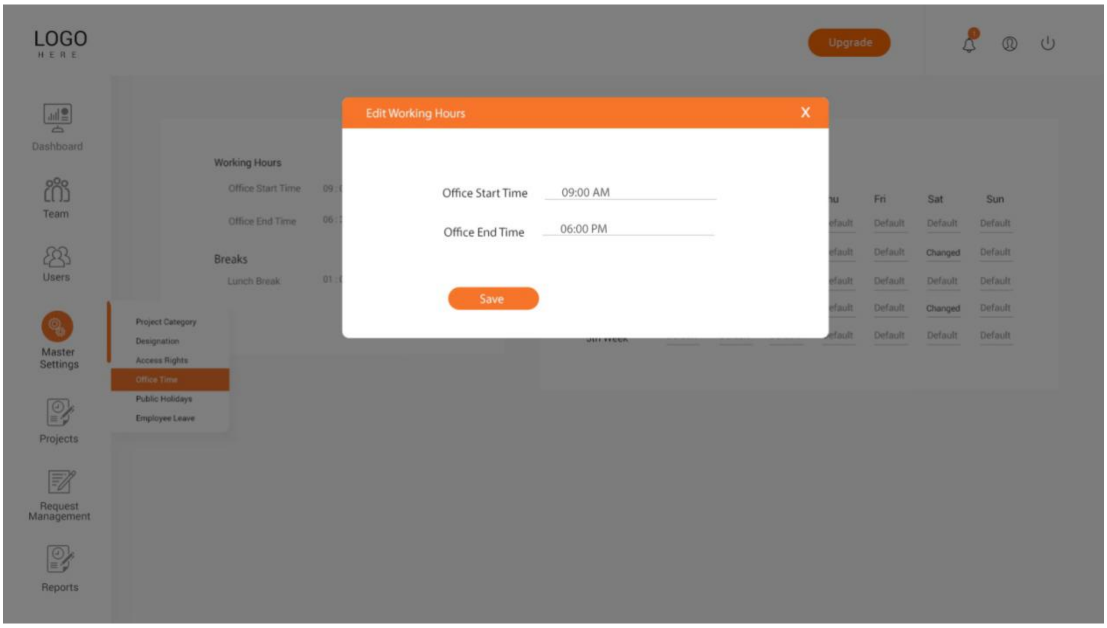
All the access privileges are listed in this page and admin can add a new access rights for a particular user group by ticking the privileges.

- **Company working time**

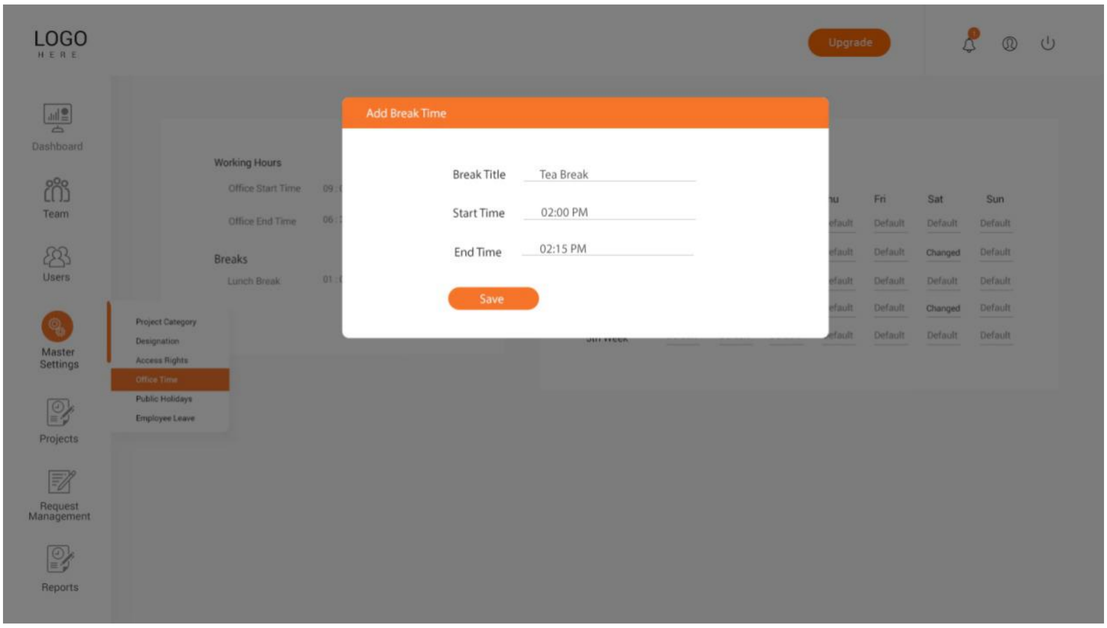


Here, admin can add common working hours, office start time, office end time and break time.

First admin need to add office start time and end time. For that, he can use the edit icon.he also can view saved working time details from the current page

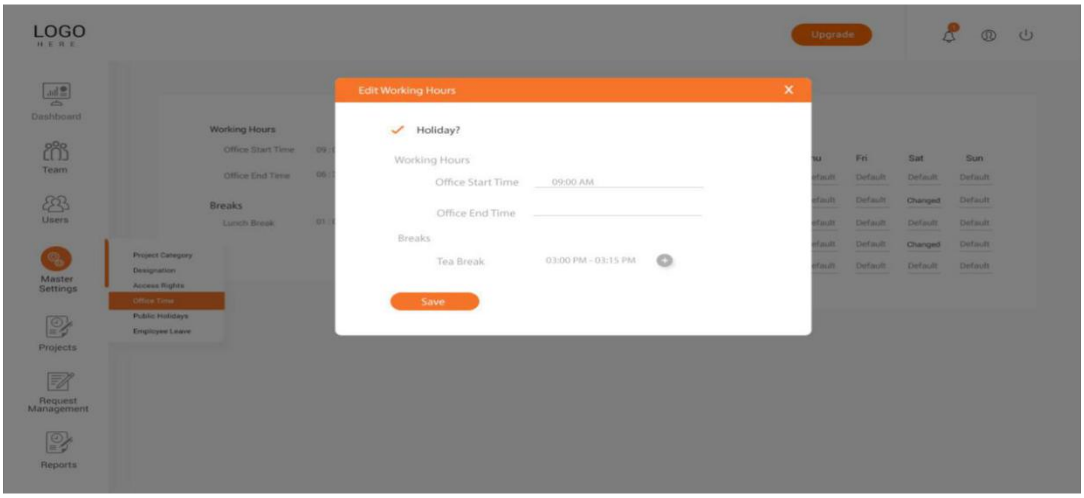


Then admin moves to add company break time, for that he can use the add icon.if he click the icon then a pop up will display as shown in figure

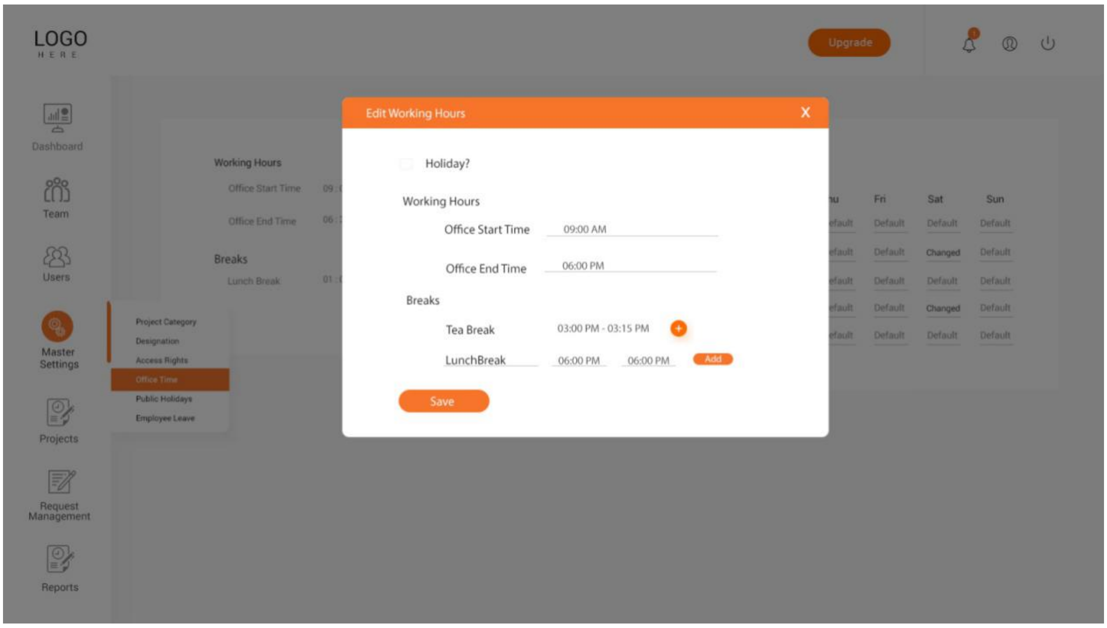


He can add more than one break time. By adding this, all days are set with this working time. If the need to change any details of a particular day, then he can click the corresponding date. Then a pop up will display.

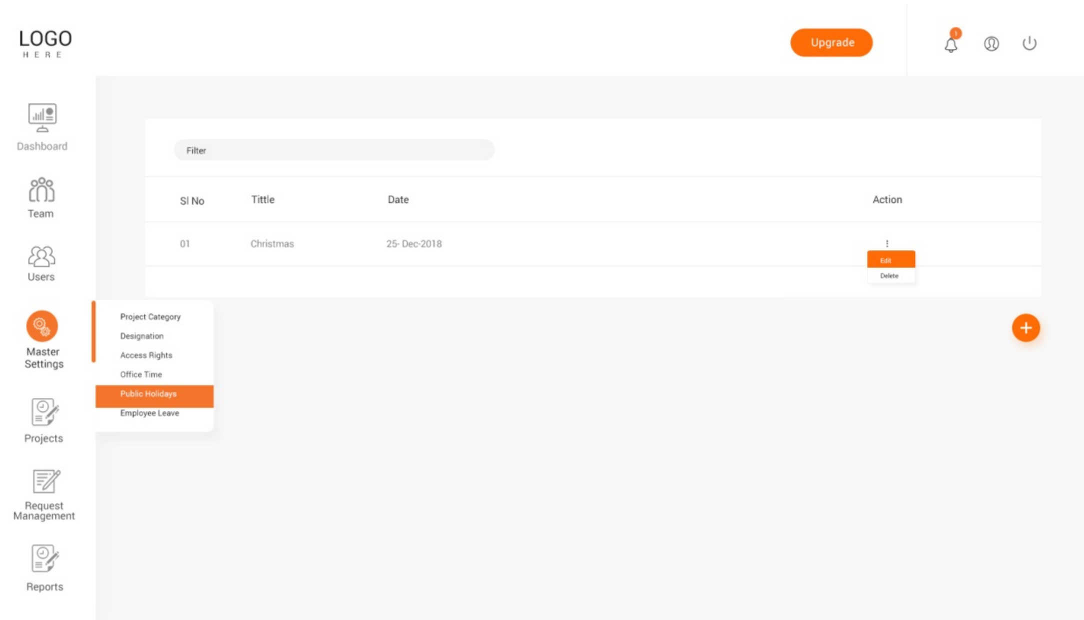
In this pop up, admin have the rights to set whether the day is holiday or not, as well as to change working time details such as office start time,office end time, break time and working hours. If he tick checkbox to set the particular day is holiday, then all other fields will be disable as shown in figure



other wise he can edit working time details such as start time, end time etc



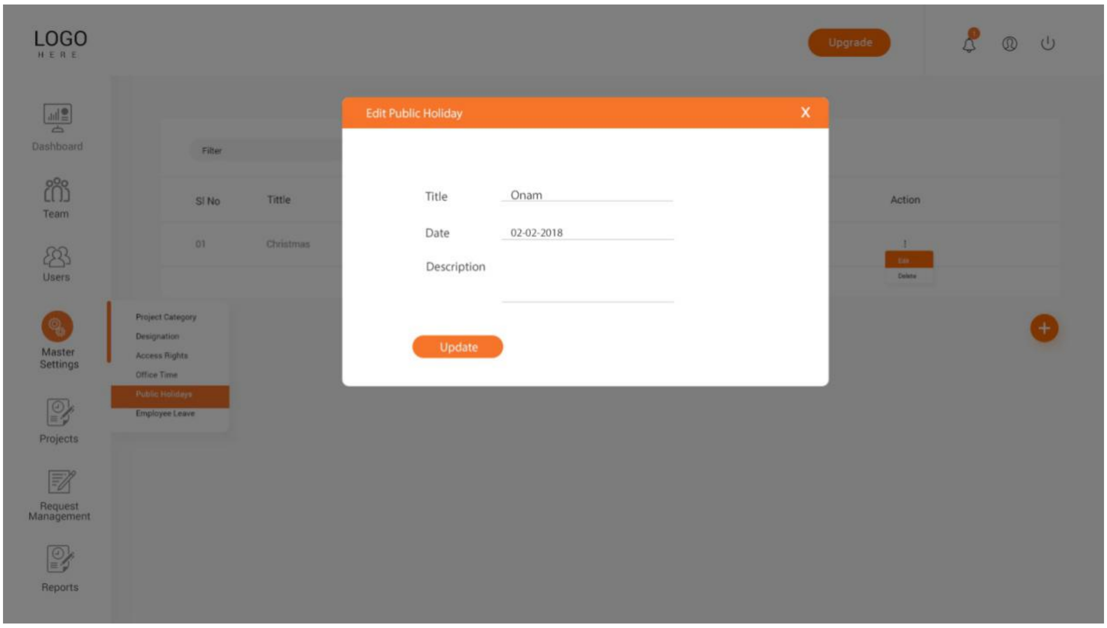
■ **Public holidays**



Here,admin can add and manage public holidays of a company.

The table contains list of all saved public holidays and its edit and delete actions.

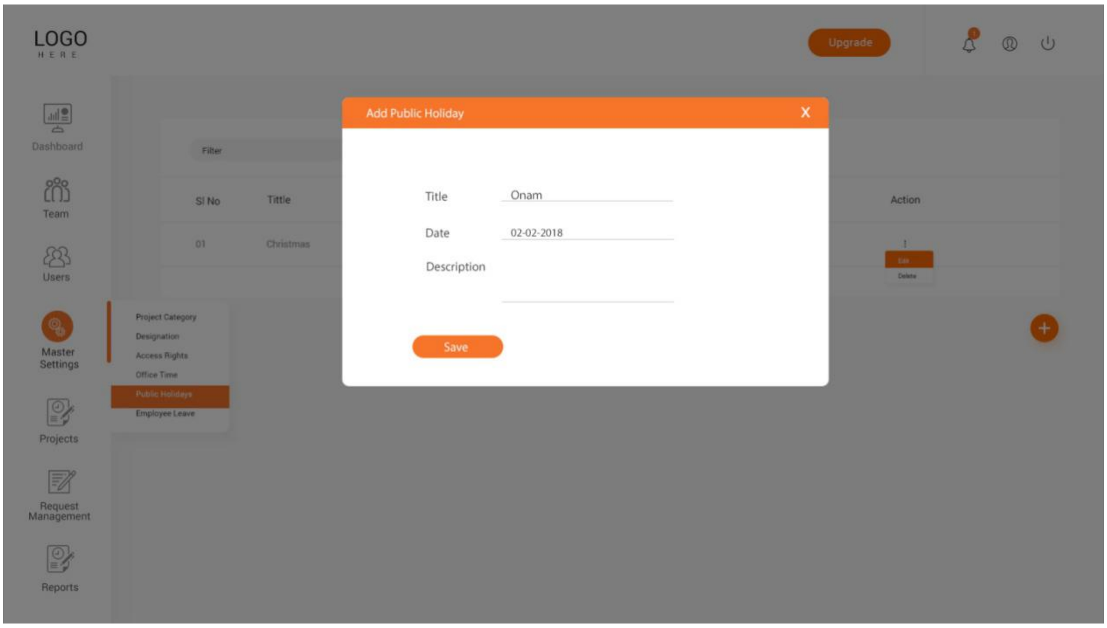
If he click the edit button,then a pop up will display as shown in figure.



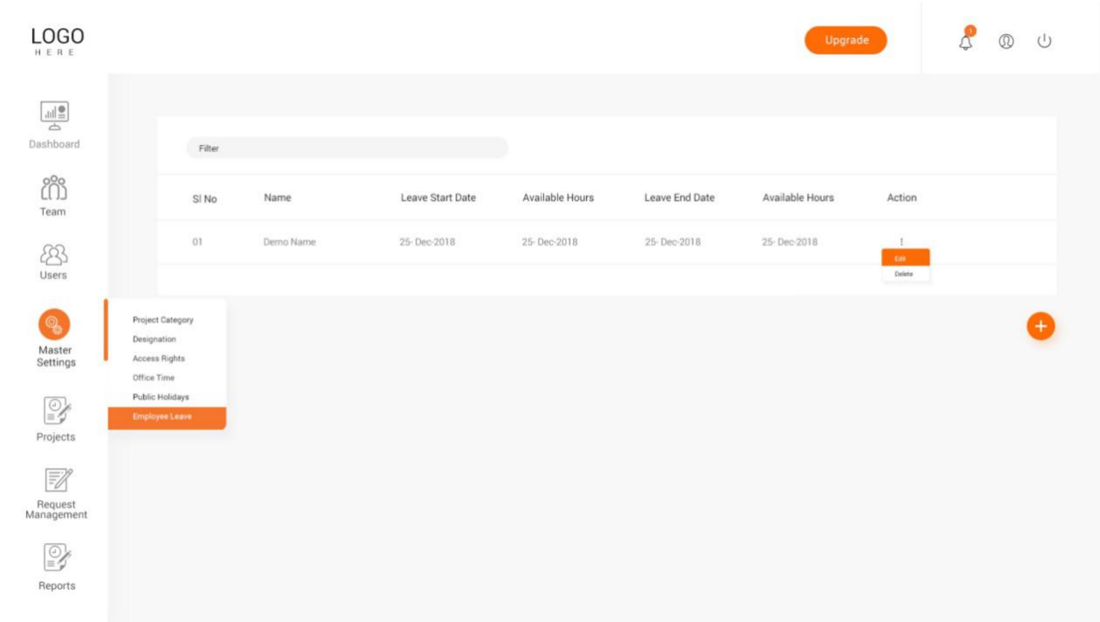
He can edit the present values from here and click update button to save

Add new:

Here admin can add a new public holiday .

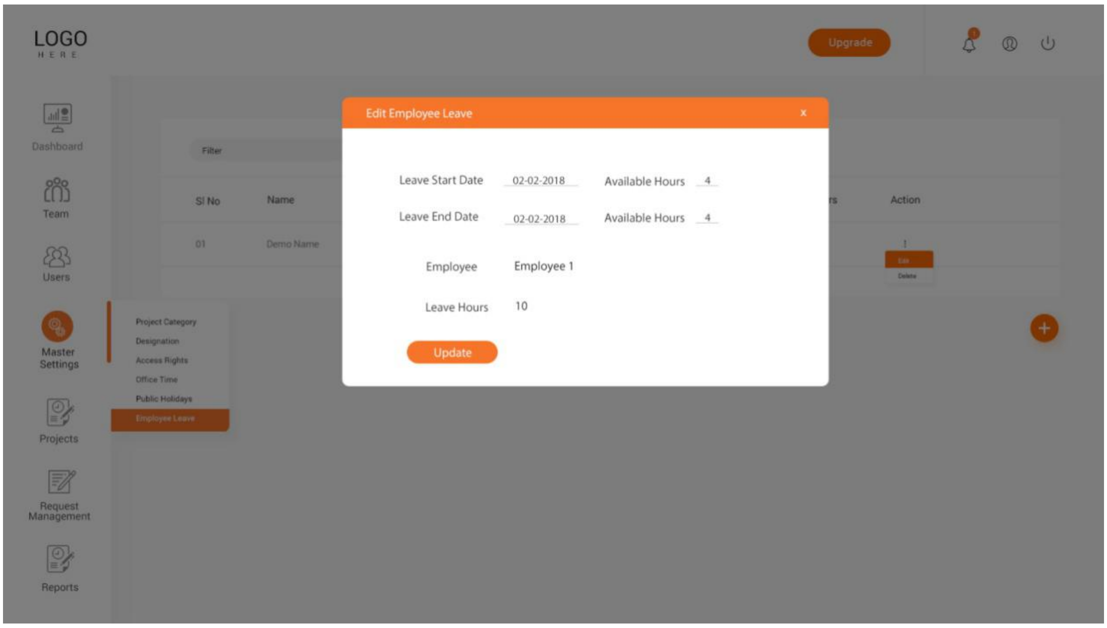


- **Employee leaves**



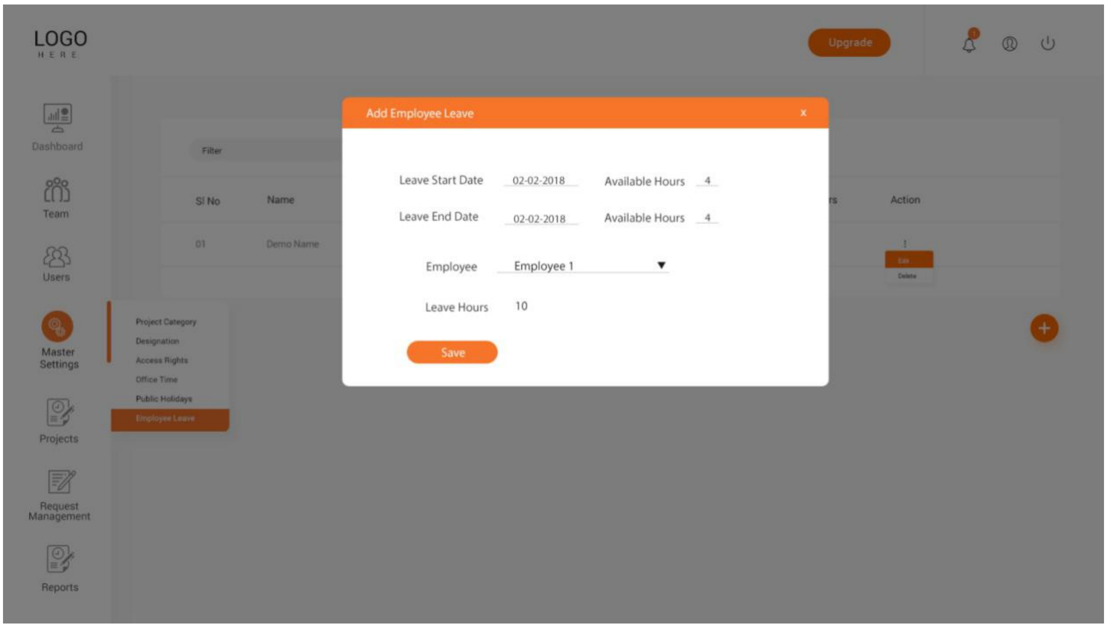
Here admin can add and manage employee leaves.

The table list saved employee leaves and an action with edit and delete button.if he choose edit button then the pop up will display as shown in figure.



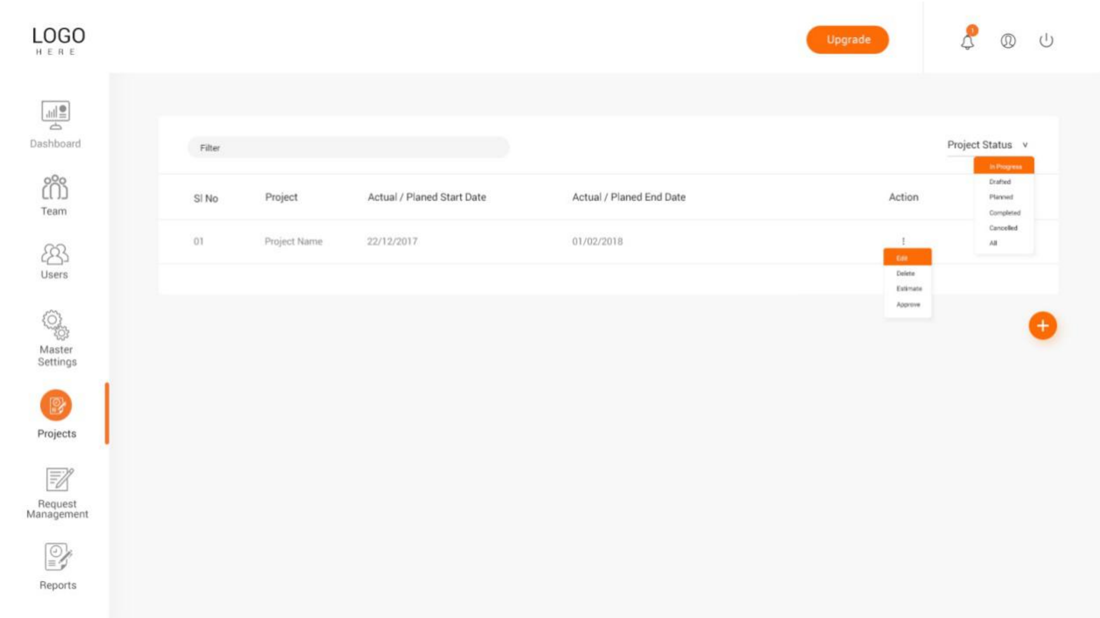
Add new:

Here company admin can add each employee leaves.

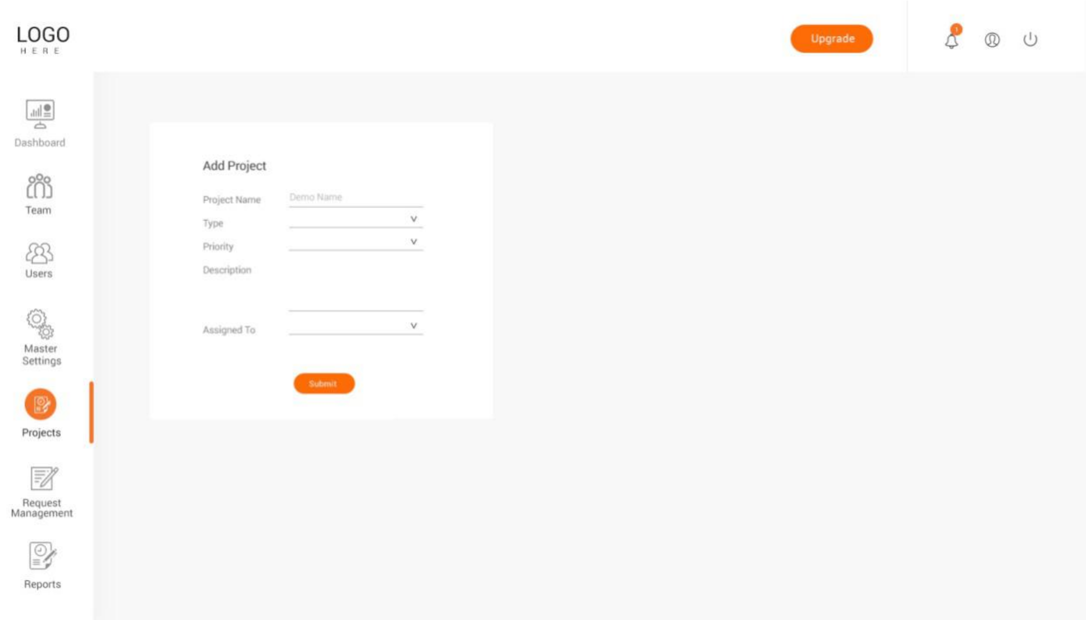


9. Project

Here the company can create new projects and can view the list of all projects under the company.



- **Create Project:**



The project type refers whether the project is billable or not. Company also can select the priority of the project which may be low, medium or high.

The project can be assigned to a team leader at the time of project creation.

- If the admin create the project, and admin does not select a team leader, a confirmation pop up is displayed to ensure that the admin select himself as a team leader for the project.
- If the admin select a team leader, a notification is sent to team leader to estimate the project.
- If the team leader creates a project, there is no option to select the team leader. In that case, the team leader set as himself.

After the project saved, a project code is generated which contain the company code, number of project that the company create and date of project creation.

Eg.: if the company code is 'sym',

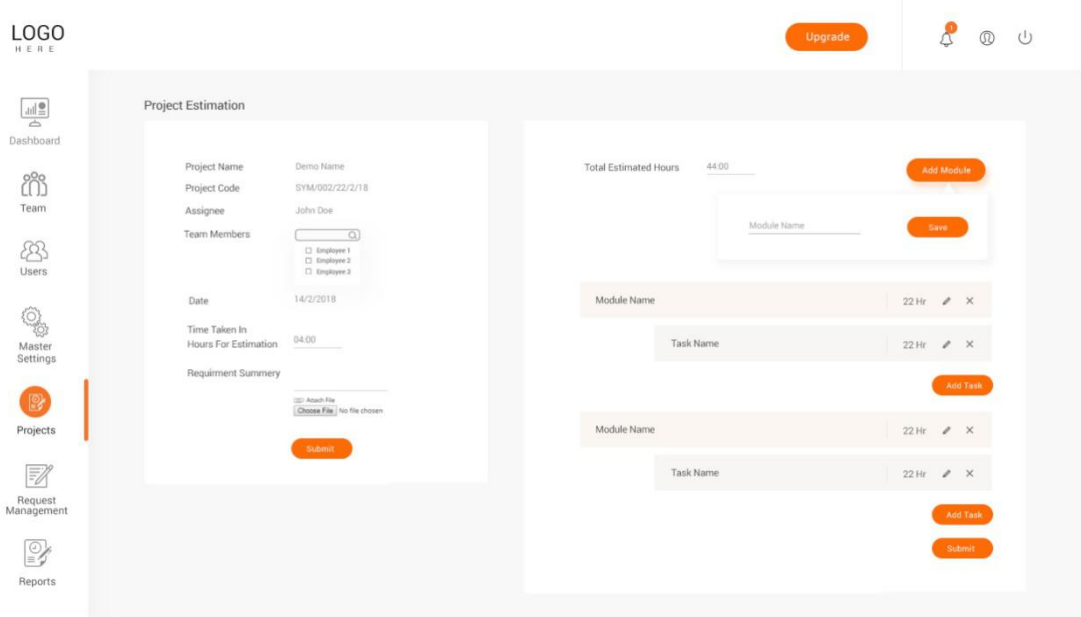
then the project code is SYMPR/002/01/02/2018

At the time of project creation, project status is 'Drafted'.

In later the project have statuses like Planned, In Progress, Completed and Canceled.

The next stage is project Estimation.

- **Project Estimation**:



The project estimation will be prepared by team leader. Team leader can select team members to create the estimation.

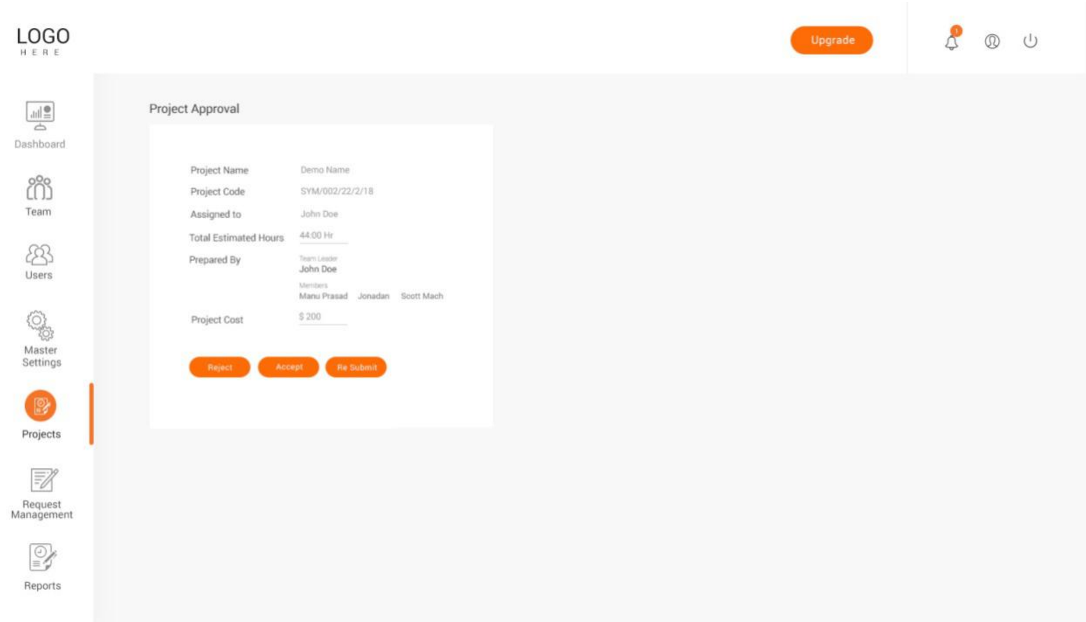
Here team leader can create task under a module. Each module is identified by name.

Task can be created by adding task name, description, planned hour and buffer hour. A task completion time is the total of planned task time and buffer time.

Planned completion time of each module is displayed on the right side which is the sum of each task's completion time under that module.

The next stage is project approval.

- **Project Approval :**



If the project is created by team leader, a notification will be sent to company admin for project approval.

Here, the admin can view the total estimation hour and also the estimation in detail. The admin can enter the project cost.

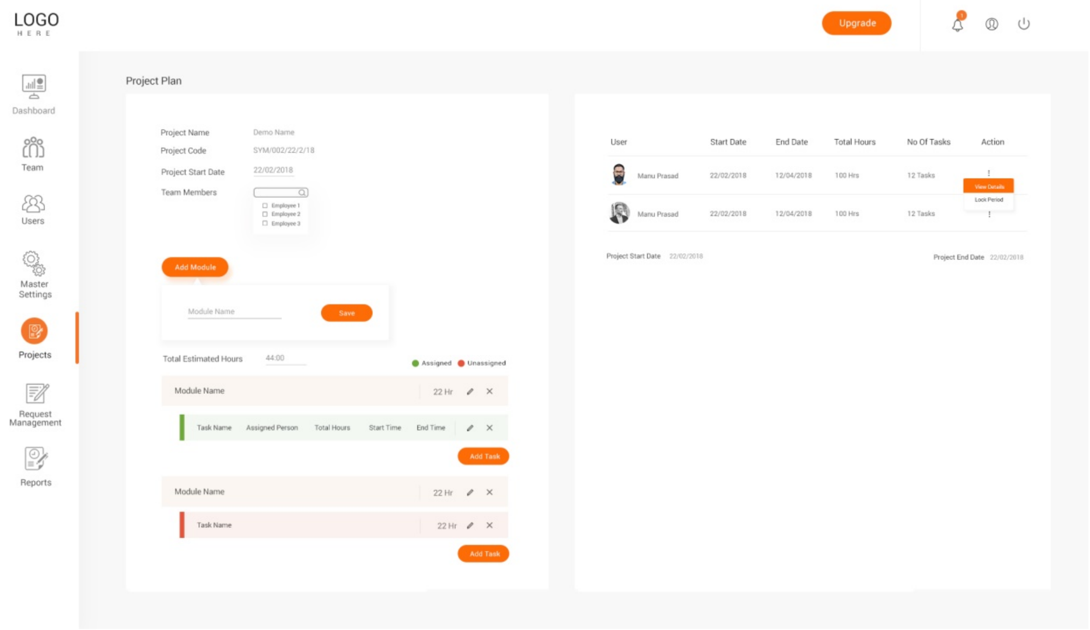
Here the admin have actions like Accept, Reject and Resubmit.

- If the admin accept the estimation, a notification will be sent to team leader.
- The admin can reject estimation and the project by clicking the Reject button and adding a reason. Then the project status will be changed to 'Canceled'.
- If the admin is unsatisfied with the project estimation, then the admin can ask the team leader to resubmit the estimation by adding the reason. In that case, team leader get a notification to resubmit the estimation.
- If admin is the team leader , then there is an Edit button instead of Resubmit. In that case, admin can edit the estimation.

  This process continue until the company admin reject or accept the estimation.

The next stage is project planning stage.

- **Project Planning Stage:**



Here the team leader can plan the project.

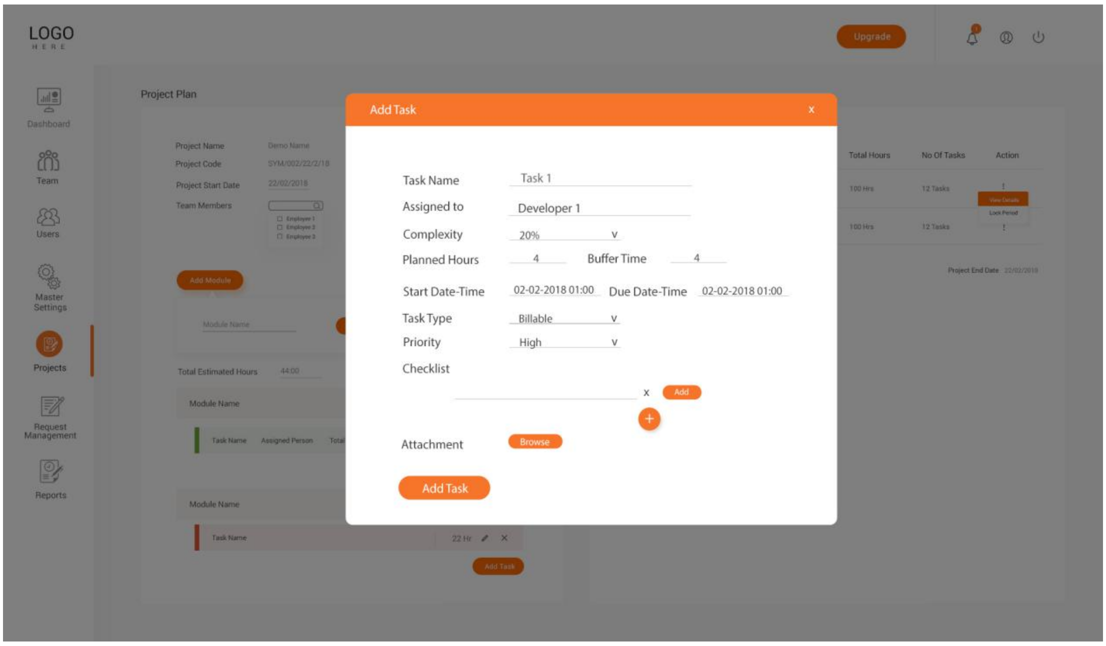
Here he can decide the team members for the project.

Here, all the modules and tasks from the estimation phase is listed.

Team leader can edit and delete old modules & tasks and also can add new modules and tasks.

Modules are listed with module name, total hours and edit delete button.

Tasks are listed under the corresponding module with assigned persons, total hours, start and end date time and edit, delete button. There is also an 'Add Task' button. If he click this button, then a pop up will display as shown in figure



Each time a person assigned to a task, the team member is listed in right side with profile picture, start date, end date, total hours, number of tasks and Actions like view details and lock period. When an already assigned team member is assigned to another task, the list is updated in end date, total hours and number of tasks. The available hours of each team member depends on the employee leaves, lock period, company work time, company off days, public holidays etc. The start date time and end date time of each task is calculated using the application. Order of the task in a module can be adjusted by dragging the tasks along the module.

The view detail page contain list of task, leave, holiday and lock period with start date, end date and total hours of selected employee.

The lock period of employee can be set by clicking the Lock Period button.

When a task is added, the status is 'New' in default.

The project start date and end date can be calculated from this table.

When the project planning stage completes, the status of the project changes from 'Drafted' to 'Planned'. At that time, a notification will be sent to all the assigned members.

During the planned start date of project, the status of the project changes from 'Planned' to 'In Progress' and a notification will be sent to all the assigned team members.

A list of project is displayed in the Project menu which contain running projects in default. It also contain a filter to filter the projects on the basis of status. It contain fields like project name, start date and end date and action.

If the project status is completed, list displays the actual start and end date. In the other cases, list shows the planned start and actual date.

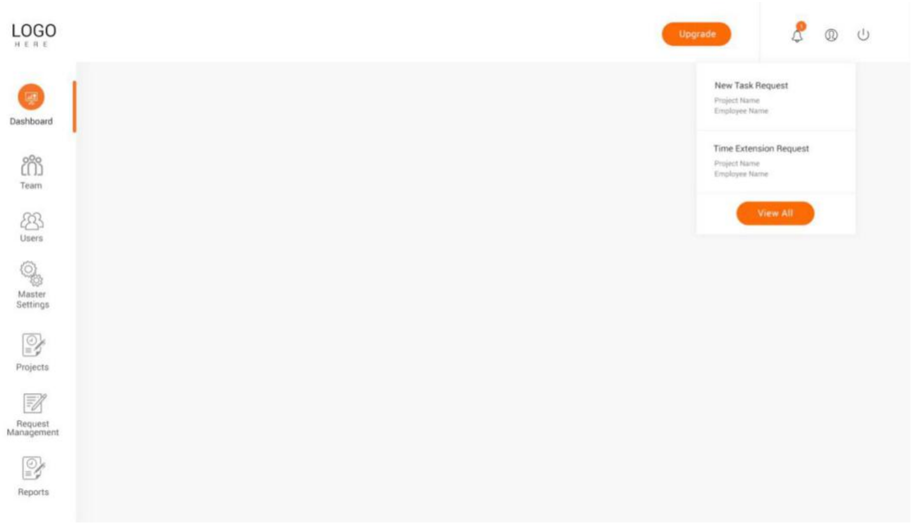
If the project is in running stage,completed stage or canceled stage, it does not contain any actions.

Otherwise it contain actions like Edit, Delete etc.

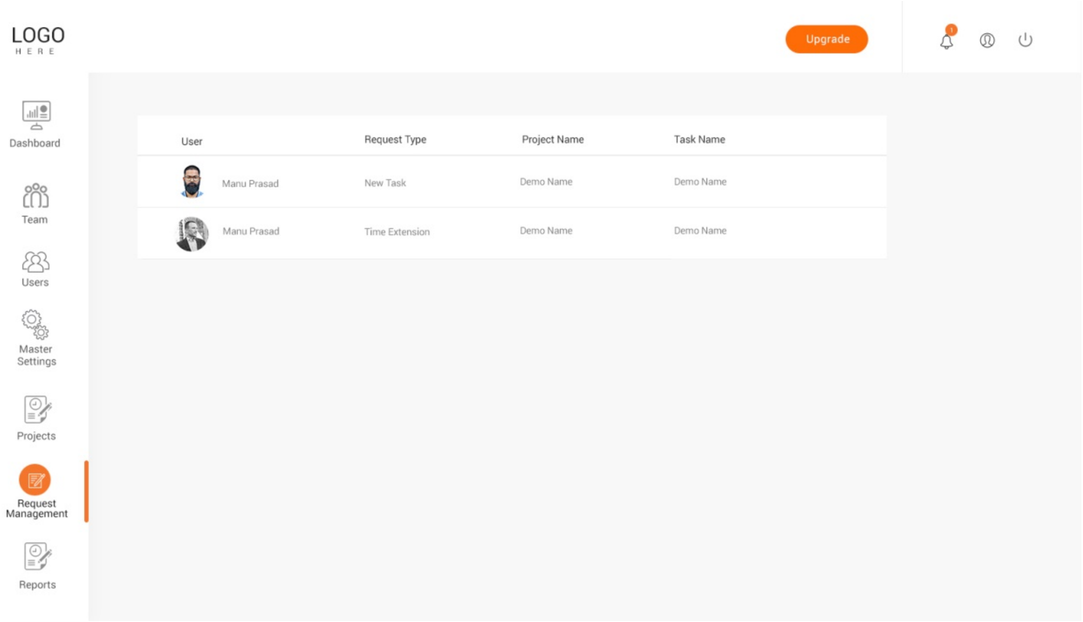
If the estimation phase of a project is pending, they can do the estimation by clicking the 'Estimate' button from the action list.

If the Approval of the project is pending, admin can approve the project by clicking the 'Approve' button in action list.

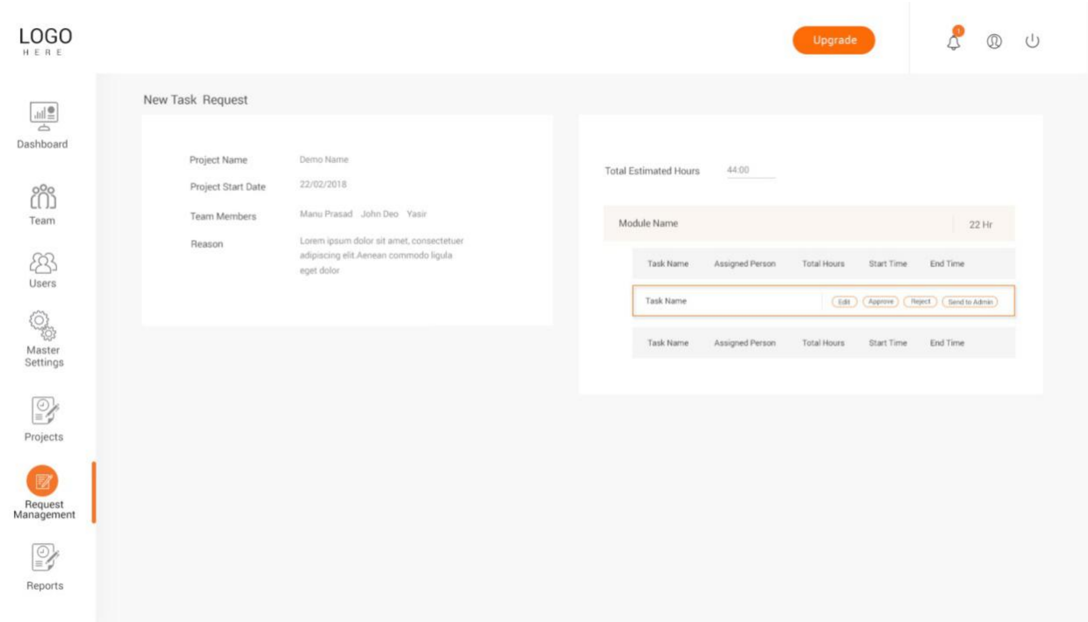
10. <u>Request management</u>



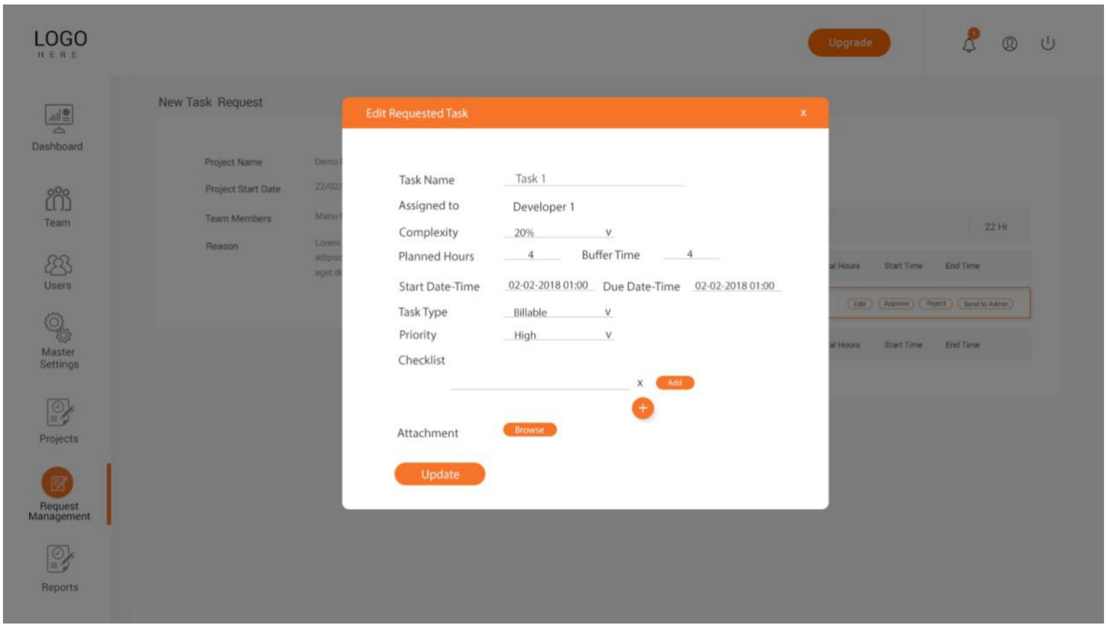
■ Request for additional task



- Team leader can manage request for an additional task from team members. When a team member request for an additional task, then admin get a notification with the project name and employee name. If admin click on the notification then he will be redirected to the following page.



If admin click the edit button , then a popup will display as shown in figure



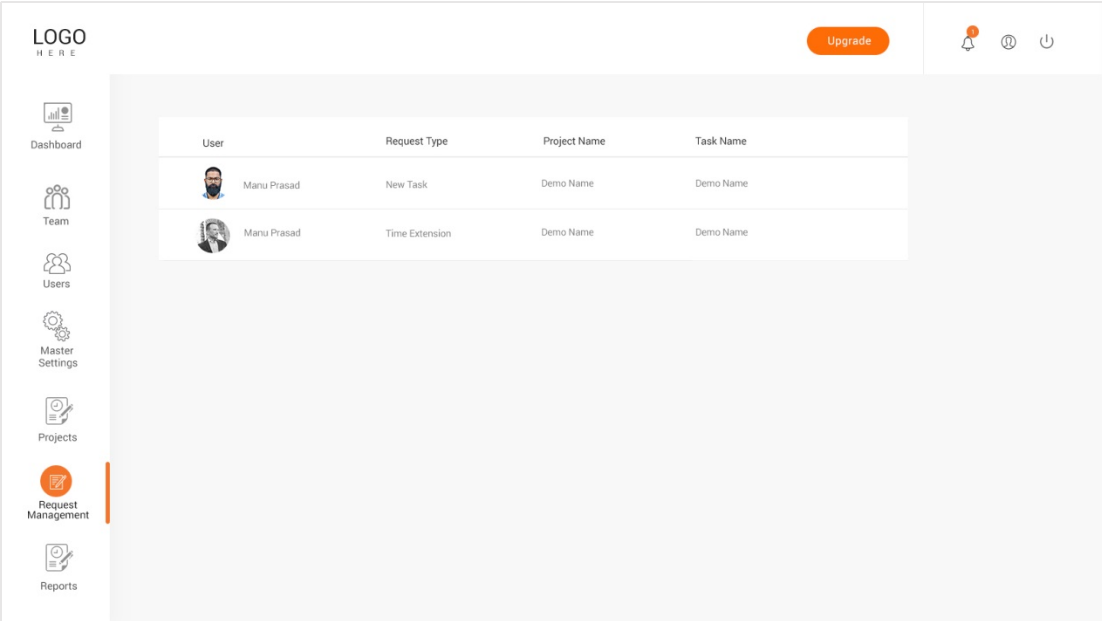
In this page admin can view the requested task as well as old tasks. The requested task are highlighted as shown in the figure. Here admin can approve or reject the request or edit the details by use the edit button.

If admin accept a request, then the requested task will be a part of the project task.

If team leader can’t take an action, he can send it to admin, then admin can approve or reject the request.

- Request for time extension

  - Team leader can manage the request for time extension of task from team members. When he click on the notification, then he will be redirected into the following page.



Here the team leader can view the requested task and all other tasks. He can approve or reject the request. If he need to edit the request details, then he can use the edit button. If he approve the request, then the time will be change based on the request. If team leader click ‘Send to admin’ button, then admin get a notification with the request and he can approve or reject the request.

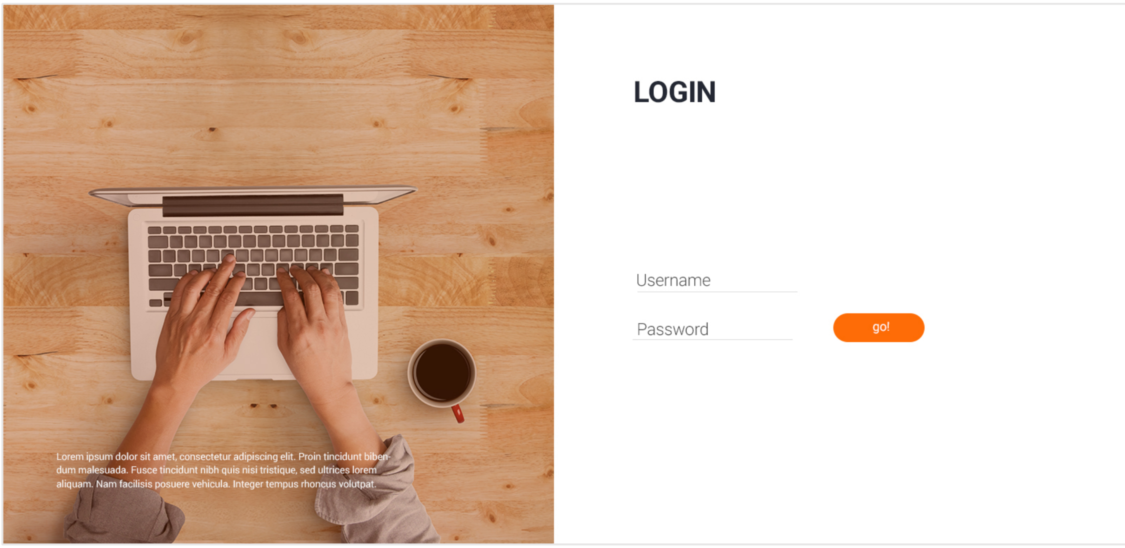
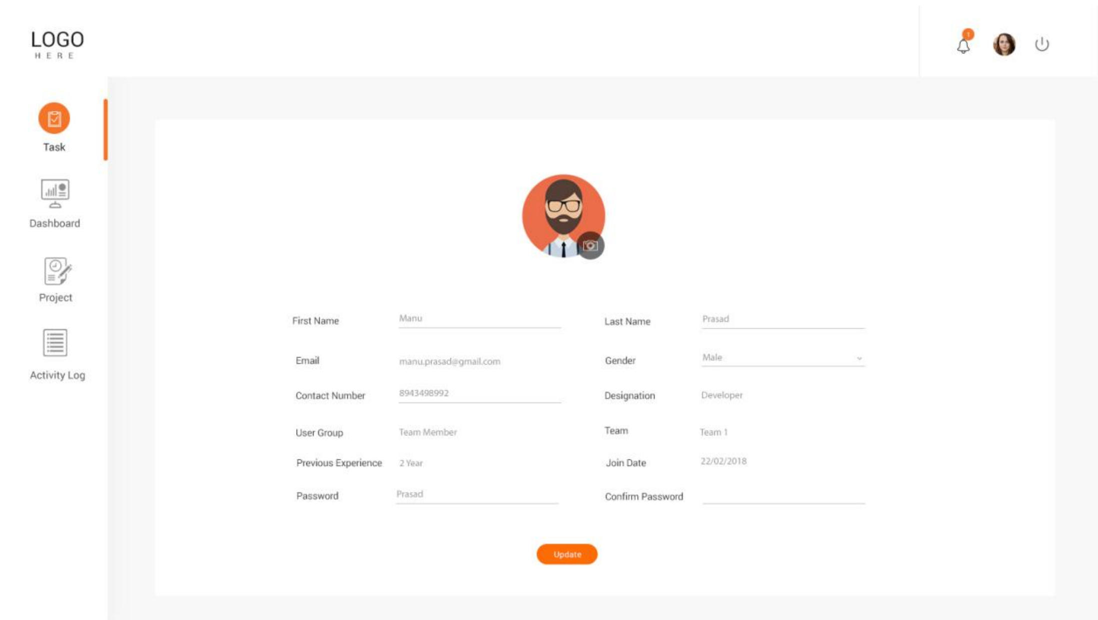
III. Team Member

1. Login



When an admin add a team member, he set a username and password to each team member. Team members can login into the system by using this credentials. If they need to change their password, then they can edit it from their profile page.

2. Profile



Here, a team member can view his profile. He can edit the fields first name, last name,contact number, photo, gender and password from h

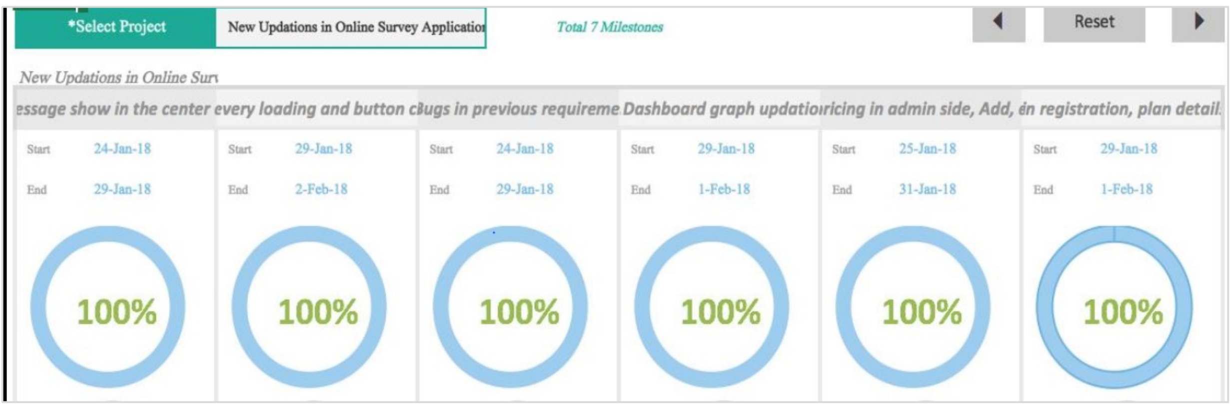
3. Dashboard

- **No.of task vs status**

X- axis of this graph shows task status and y -axis shows no of tasks.

Team member can view all the projects that he belongs in a filter. If he select any one of the project, then he can analyse each of his task and its status using this graph.

- **Percentage of projects**

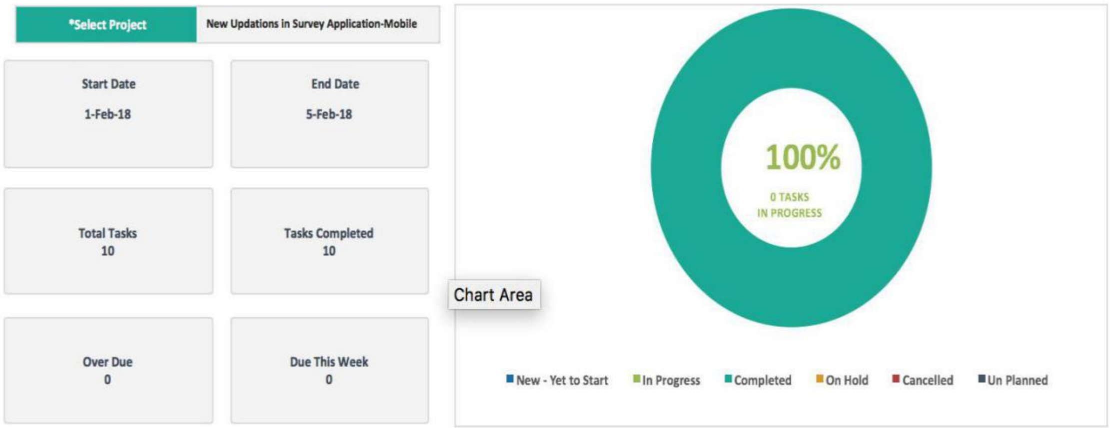


It is a pie graph which shows percentage completion of each task. Team member can select start date and end date from the date picker above. Team member can filter the data based on projects by selecting a project in the drop down.

- **Planned hours vs actual hours**

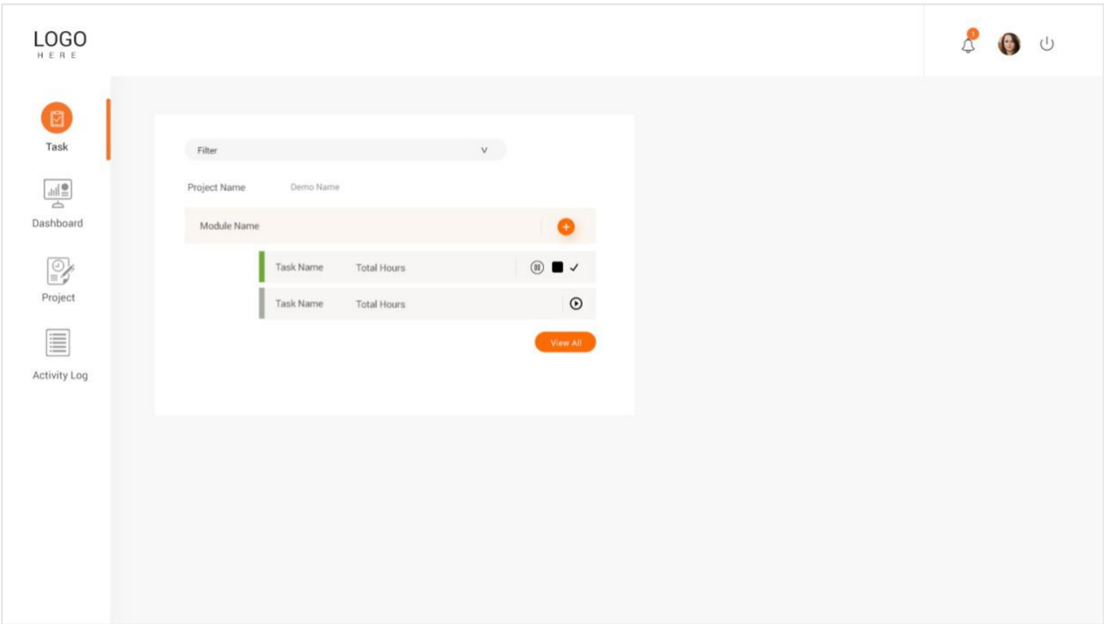
It is a bar graph which shows total planed hours and actual hours of each project that the team member belongs. He can choose any one of the project from the drop down. He can view the projects in drop down only if he belongs in it.

- **No.of tasks vs status**



Team member can view all the projects that he belongs in a drop down below the graph. If he select any on of the project, then he can view the pie graph of no of task and its status of that selected project. He can also view the start date, end date, total no of task,total no .of task completed, no of task over due and no of tasks which due this week

4. My Task



When team member login to account, the first page visible is the personal task list. It helps to figure out what he need to work on that day-i.e., the pending tasks and his assigned work on that day. It is generated as based on the working hour of a company. Task list contain tasks with planned hours, actual hours, progress percentage and current status. He can view more tasks by clicking ‘View More’ button.

If the task is ‘In progress’, then there is a count down in actual hours side. If it is in Hold/ Paused state, the time until the status changed is displayed. If it is a new task, then the time is 0.00. The same logic is applied for progress percentage also.

It contain a filter to filter the tasks based on the status.

Each status has its own color code.

The visualization helps to identify which tasks are over due and which ones are on time.

Task status are New, Paused, In progress, Hold and Done.

Each task may have the actions like Start, Pause, Resume, Hold and Done.

Initially all the tasks have the status ‘New’ in default and have action ‘Start’.

To start a task, Click on the start icon on right side of the particular task. From now on the application tracks the time the team member working on for that particular task. At this time, task have the status ‘In Progress’ and all other tasks action list are disabled. When finish a task, click on the done button.

The current task can be put on ‘Pause’ with a remarks. At this time, the timer stops and start only if the team member resume the task. When a task have a status ‘Paused’, he can only resume that task- I.e., other task cannot be start. Whenever the user resume the task, task status changes from ‘Paused’ to ‘In Progress’.

If the user want to close the current task temporarily and want to start another task, he can press the ‘Hold’ button with current task progress percentage and remarks(Here the task status is ‘Hold’). Then all the tasks action list are enabled and he can Start a new task.

If team member belong to more than one project, he need to select task that he want to work on.

The application shows the accumulate time for all tasks in one project.

Additionally there is two buttons, ‘New task request’ and ‘Time Extension request’.

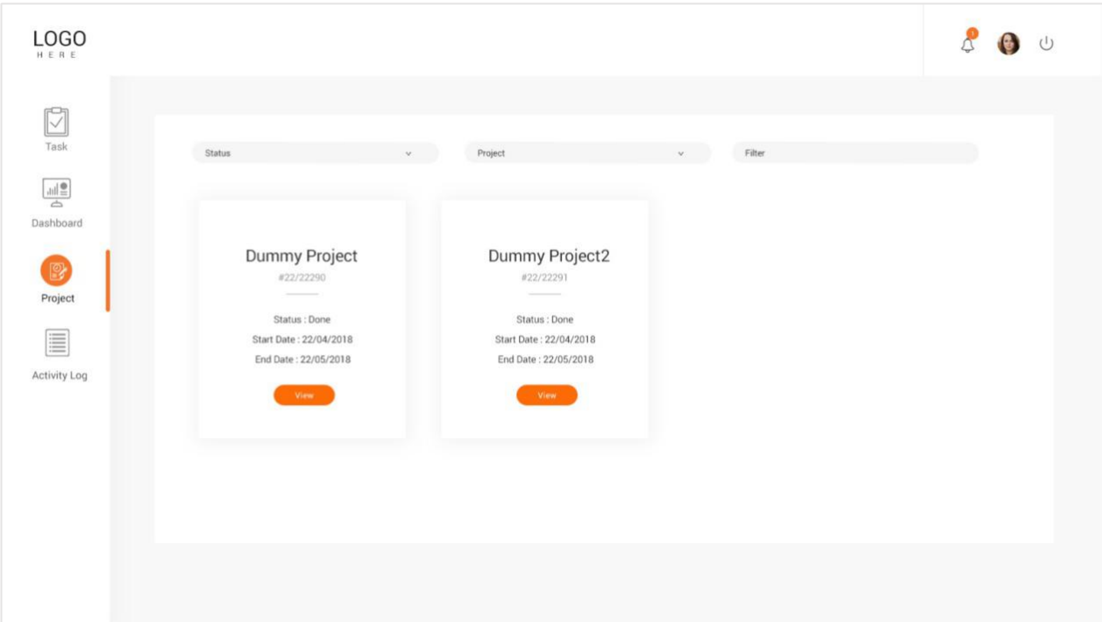
‘New task request’ option is used by the team member to request a new task to team leader against a module.

A pop up is displayed to enter the task details.

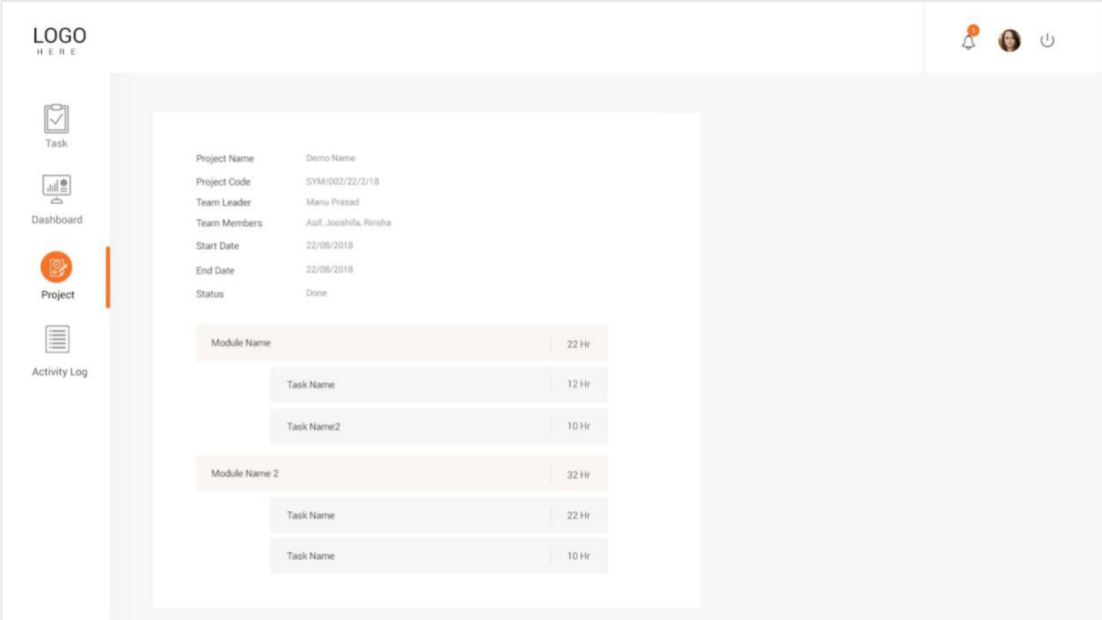
There is also another facility, Time Extension Request. This is used when the team member needs additional time to complete a task. The pop up below shows the Time Extension Request.

5. Projects

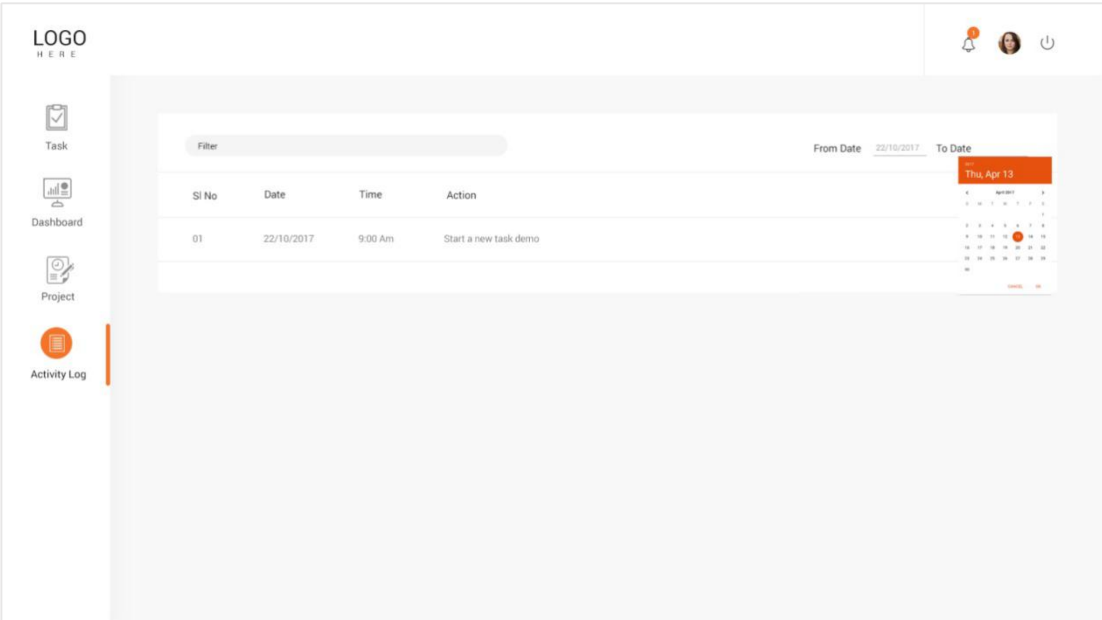
Here, team members can view all projects that he belongs.



If he click any of the tile, then he will be redirected to page which shows detailed view of the project.



6. Activity log



Here, team member can view all his actions with date and time. He can filter the log based on date range
